# Privacy-First Analytics

## Full Business Plan & Product Roadmap

Prepared for: Ayush | 2026

## 1. Executive Summary

Privacy-First Analytics is a SaaS platform that gives website owners full visibility into their traffic — without collecting personal data, setting cookies, or violating GDPR, CCPA, or other privacy laws. It is a lightweight, open-source-core product sold as a hosted subscription.

The opportunity: Google Analytics dominance is cracking. Regulators have fined or blocked it across the EU. Businesses urgently need a compliant alternative that is simple, affordable, and trustworthy.

The founder advantage: Deep backend expertise in database architecture, API design, read/write routing, and replication — precisely the skills needed to build a high-performance event ingestion pipeline that can handle millions of pageviews per day.

## 2. The Problem

- Google Analytics collects personal data, sets tracking cookies, and is now blocked or fined in multiple EU countries
- GDPR consent banners are annoying users and reducing analytics accuracy by 30-50%
- Existing alternatives (Plausible, Fathom) are good but expensive and have limited DX / API access
- Small businesses and indie developers are underserved — they need something cheap, simple, and self-hostable

## 3. The Solution

A privacy-first web analytics platform with:

- One-line JS embed (like Google Analytics, but cookieless)
- Real-time dashboard: pageviews, unique visitors, referrers, device types, countries
- No personal data collected — fully GDPR/CCPA compliant out of the box
- Open source self-hosted Docker image (builds trust and adoption)
- Cloud hosted version for those who don't want to manage infrastructure
- AI-powered insights: 'Your traffic dropped 30% — likely cause: X' (unique differentiator)

## 4. Market Opportunity

Every website on earth needs analytics. The addressable market is enormous:

| Segment | Size | Notes |
|---|---|---|
| Total websites globally | 1.1 billion+ | Huge TAM |
| Active websites with analytics | ~200 million | Core target market |
| GDPR-affected businesses (EU) | ~25 million | Urgent compliance need |
| Indie developers / solo makers | ~5 million | Early adopters, vocal community |
| Agencies managing client sites | ~500,000 | High LTV, multi-site plans |

Existing privacy-first analytics market (Plausible + Fathom + Umami) is growing 40%+ YoY — proof of demand.

## 5. Competitive Analysis

| Product | Price/mo | Open Source | Self-hostable | AI Insights |
|---|---|---|---|---|
| Google Analytics | Free* | No | No | No |
| Plausible | $9+ | Yes | Yes | No |
| Fathom | $14+ | No | No | No |
| Umami | Free / $9+ | Yes | Yes | No |
| Your Product | $7+ (undercut) | Yes | Yes | Yes (unique) |

*Google Analytics is 'free' because users are the product — data is sold to advertisers.

Your edge: lowest price + best developer experience + AI insights that none of the competitors offer yet.

## 6. Product Roadmap

### Phase 1 — MVP (Month 1–3)

Goal: Smallest thing people will pay for

- One-line JS tracking snippet (cookieless, <1KB)
- Track pageviews, unique visitors, referrers, device types, countries
- Clean real-time dashboard
- Multi-site support + basic auth
- Self-hosted Docker image (open source)

- Stripe billing integration

Launch: Product Hunt + Hacker News 'Show HN'

### Phase 2 — Growth (Month 4–6)

Goal: Retention + word of mouth

- Goal / conversion tracking
- Public shareable dashboards
- Weekly email digest reports
- WordPress + Webflow plugins
- GDPR compliance badge for customers to display on their sites
- Annual billing discount (reduce churn)

### Phase 3 — Scale (Month 7–12)

Goal: Increase ACV, reduce churn

- REST API access for power users
- Team seats + role management
- Custom event tracking
- Funnel analysis
- Slack / email alerts on traffic anomalies
- White-label option for agencies

### Phase 4 — Moat (Year 2+)

Goal: Defensible differentiation

- AI-generated insights engine ('Your traffic dropped 30% — likely cause: X')
- Industry benchmarking — compare your traffic trends vs peers
- Data export marketplace
- Potential acquisition target or small fundraise

## 7. Tech Stack

### Frontend

| Layer | Choice | Why |
|---|---|---|
| Framework | Next.js | Fast, SEO-friendly, great DX |
| UI | Tailwind + shadcn/ui | Clean, polished, low effort |

| Layer | Choice | Why |
|---|---|---|
| Charts | Recharts | Lightweight, customizable |

### Backend

| Layer | Choice | Why |
|---|---|---|
| API | Go or Node.js | Go preferred for high-throughput event ingestion |
| Event queue | Kafka or Redis Streams | Handle traffic spikes without data loss |
| Primary DB | PostgreSQL | Reliable, your comfort zone |
| Analytics DB | ClickHouse | Built for time-series, insanely fast aggregations |
| Cache | Redis | Fast dashboard queries, session management |
| Auth | NextAuth / Lucia | Simple, self-hostable |

### Infrastructure

| Layer | Choice | Why |
|---|---|---|
| Hosting | Fly.io or Railway | Cheap to start, easy to scale |
| CDN | Cloudflare | Free tier, global edge for JS snippet delivery |
| Storage | Cloudflare R2 / S3 | Cheap exports, backups |
| Payments | Stripe | Industry standard, great API |
| Email | Resend | Simple transactional email |

## 8. Monetization

| Plan | Price/mo | Sites | Pageviews/mo | Features |
|---|---|---|---|---|
| Free | $0 | 1 | 10,000 | Basic dashboard, community support |
| Starter | $7 | 3 | 100,000 | All core features, email support |

| Plan | Price/mo | Sites | Pageviews/mo | Features |
|---|---|---|---|---|
| Pro | $19 | 10 | 1,000,000 | API access, custom events, alerts |
| Agency | $49 | Unlimited | 10,000,000 | White-label, team seats, priority support |

## 9. Revenue Projections

| Timeline | Paying Customers | Avg Revenue/Customer | MRR |
|---|---|---|---|
| Month 3 | 20 | $10 | $200 |
| Month 6 | 100 | $12 | $1,200 |
| Month 12 | 400 | $14 | $5,600 |
| Year 2 | 1,200 | $16 | $19,200 |
| Year 3 | 3,000 | $18 | $54,000 |

**Path to $1M ARR: ~4,600 paying customers at an average of $18/month. Achievable in 3-4 years organically.**

## 10. Risks & Mitigations

| Risk | Mitigation |
|---|---|
| Plausible already exists | Undercut on price, add AI insights, better self-host DX |
| Low initial traffic / slow growth | Target Hacker News, dev Twitter, indie hacker communities aggressively |
| ClickHouse learning curve | Start with TimescaleDB (Postgres extension), migrate to ClickHouse at scale |
| High churn | Weekly email digests keep users engaged; annual plan discounts lock in revenue |
| Single founder burnout | Productize everything; avoid custom work; automate support with docs |

## 11. Domain Recommendation

You have three domains to choose from. Here is the assessment:

| Domain | Score | Verdict | Notes |
|---|---|---|---|
| aydex.cloud | 9/10 | Best choice | Short, memorable, modern .cloud TLD fits the product perfectly |
| aydexos.com | 7/10 | Good backup | The 'os' suffix feels like an OS product, slightly confusing |
| infoharness.com | 5/10 | Not recommended | Too generic, hard to remember, doesn't suggest analytics |

Recommendation: Launch on aydex.cloud. It is short, brandable, modern, and the .cloud TLD reinforces that this is a hosted SaaS product. If you want a .com fallback, register aydex.com if available.

## 12. Your First 3 Actions This Week

- **Set up a landing page on aydex.cloud with a waitlist email signup — even one page is enough to start collecting leads**
- **Build the JS tracking snippet — just pageviews, nothing else. Get it working end-to-end in 48 hours**
- **Post on Hacker News asking: 'Would you pay $7/month for cookieless, GDPR-compliant analytics?' — validate demand before building more**

— End of Business Plan —
